Description of Property and Eligibility Determination (Use continuation sheet if necessary and attach map and photo)

DESCRIPTION OF PROPERTY

The Rosedale Survey District is an unplanned suburban neighborhood located approximately four miles northeast of the heart of the city of Baltimore on the old Philadelphia Turnpike (MD 7). The resource includes all properties with a direct connection to the two-lane road between the Baltimore City/County line in the southwest and the I-695 ramps in the northeast. The elements that comprise this resource are unified by their association with Philadelphia Road (MD 7) and are separated from other areas of growth by changes in building density and neighborhood organization. The area includes a number of residential, commercial, and civic buildings dating from the mid-nineteenth century to the present, with a large concentration of mid-twentieth century buildings. The character of the area is primarily that of an unplanned linear development, although some planned residential sub-divisions are present on side streets along the roadway.

Many of the buildings within the Rosedale Survey District have been altered. Common alterations include additions, enclosure of porches, and the replacement of historic building materials such as windows, siding, and roofing. The haphazard, unplanned growth in the area in combination with the extensive alterations to individual buildings within the survey district has resulted in an overall character that lacks cohesiveness or identity through the built environment. The unplanned

neighborhood is the cumulative result of several phases of growth. As a result, the individual resources within the neighborhood have a wide range of building styles and construction dates, representing various periods of suburbanization.

ELIGIBILITY DETERMINATION

The Rosedale Survey District is an example of an unplanned suburban neighborhood that reflects early suburban construction and real estate speculation prior to active developer participation and has a strong association with the suburbanization movement, or the move away from urban living toward suburban development, that occurred outside of Baltimore during the late nineteenth and through the twentieth century. However, because the significance of unplanned neighborhoods is largely based upon architectural styles represented and the integrity of individual structures that comprise the resource, the Rosedale Survey District is not eligible.

The Rosedale Survey District does possess all of the distinctive characteristics of its type: it lacks a formal planned streetscape design; it includes a wide range of architectural styles and construction dates representing several periods of construction; it includes a variety of building forms and functions; and the arrangement of buildings is varied as a result of construction over time and a lack of zoning regulations or deed restrictions. Although resources along Philadelphia Road are separated from other areas of growth by changes in building density, the district does not form a cohesive cluster of buildings with a recognizable association with early or random growth.

The Rosedale Survey District has suffered from a loss of integrity. The vast majority of buildings have been altered so that integrity of materials and the integrity of design of the individual components that comprise the district have been lost. As is often the case in unplanned suburban neighborhoods where change over time is a character-defining element, integrity of setting is not intact around the Rosedale Survey District. Due to this loss of integrity, the Rosedale Survey District does not satisfy the requirements for an eligible unplanned suburban neighborhood laid out in the Suburbanization Context and Survey Methodology.

NATIONAL REGISTER BOUNDARY AND JUSTIFICATION

The Rosedale Survey District includes all properties with a direct connection to Philadelphia Road (MD 7) between the Baltimore City/County line in the southwest and the I-695 ramps in the northeast. The elements that comprise this resource are unified by their association with Philadelphia Road and are separated from other areas of growth by changes in building density and neighborhood organization. Because the resource does not appear to be eligible, a formal boundary was not defined.

Prepared by: A&HC, Inc.

Date Prepared: 1/30/2006

BALTIMORE COUNTY
HISTORIC SITE SUMMARY SHEET

SURVEY NO.: BA-3198

NAME: Rosedale Survey District

LOCATION: along Philadelphia Road (MD 7), from Baltimore City line to I-695

DATE: 1850-Present

ACCESS: Private and Public

DESCRIPTION:

The Rosedale Survey District is an unplanned suburban neighborhood located approximately four miles northeast of the heart of the city of Baltimore on the old Philadelphia Turnpike (MD 7). The resource includes all properties with a direct connection to the two-lane road between the Baltimore City/County line in the southwest and the I-695 ramps in the northeast. The elements that comprise this resource are unified by their association with Philadelphia Road (MD 7) and are separated from other areas of growth by changes in building density and neighborhood organization. The area includes a number of residential, commercial, and civic buildings dating from the mid-nineteenth century to the present, with a large concentration of mid-twentieth century buildings. The character of the area is primarily that of an unplanned linear development, although some planned residential sub-divisions are present on side streets along the roadway.

SIGNIFICANCE:

The Rosedale Survey District is an example of an unplanned suburban neighborhood that reflects early suburban construction and real estate speculation prior to active developer participation and has a strong association with the suburbanization movement, or the move away from urban living toward suburban development, that occurred outside of Baltimore during the late nineteenth and through the twentieth century. However, because the significance of unplanned neighborhoods is largely based upon architectural styles represented and the integrity of individual structures that comprise the resource, the Rosedale Survey District is not eligible.

The Rosedale Survey District does possess all of the distinctive characteristics of its type: it lacks a formal planned streetscape design; it includes a wide range of architectural styles and construction dates representing several periods of construction; it includes a variety of building forms and functions; and the arrangement of buildings is varied as a result of construction over time and a lack of zoning regulations or deed restrictions. Although resources along Philadelphia Road are separated from other areas of growth by changes in building density, the district does not form a cohesive cluster of buildings with a recognizable association with early or random growth.

The Rosedale Survey District has suffered from a loss of integrity. The vast majority of buildings have been altered so that integrity of materials and the integrity of design of the individual components that comprise the district have been lost. As is often the case in unplanned suburban neighborhoods where change over time is a character-defining element, integrity of setting is not intact around the Rosedale Survey District. Due to this loss of integrity, the Rosedale Survey District does not satisfy the requirements for an eligible unplanned suburban neighborhood laid out in the Suburbanization Context and Survey Methodology.

Prepare both a one paragraph summary and a comprehensive description of the resource and its various elements as it exists today.

The Rosedale Survey District is an unplanned suburban neighborhood located approximately four miles northeast of the heart of the city of Baltimore on the old Philadelphia Turnpike (MD 7). The resource includes all properties with a direct connection to the two-lane road between the Baltimore City/County line in the southwest and the end of the I-695 on/off ramps in the northeast. The elements that comprise this resource are unified by their association with Philadelphia Road (MD 7) and are separated from other areas of growth by changes in building density and neighborhood organization. The area includes a number of residential, commercial, and civic buildings dating from the mid-nineteenth century to the present, with a large concentration of mid-twentieth century buildings. The character of the area is primarily that of an unplanned linear development, although some planned residential sub-divisions are present on side streets along the roadway.

During the nineteenth century, the Rosedale area was rural in character. Farms and early suburban residences were located at intervals along the Baltimore/Philadelphia Turnpike (now Philadelphia Road or MD 7). The vast majority of the buildings that survive from the nineteenth century are two-story frame buildings with side-gable roofs and central gabled wall dormers (Photographs 7, 23, and 42). Community buildings, such as churches, schools, and commercial buildings, had a similar scale and form even though their function was not residential (Photographs 57 and 59).

Around the turn of the twentieth century, the heart of Rosedale was located just west of the center of the survey district, in the vicinity of Hamilton and Chesaco Avenues. The area surrounding these intersections contained many commercial and civic buildings, in addition to residences. During the 1850s and 1860s, roads branching off of Philadelphia Road and connecting with other roads to the north and to the Philadelphia, Wilmington, and Baltimore Railroad to the south were established.

With the introduction of the automobile, suburban growth accelerated in the Rosedale area. Many houses were built along Philadelphia Road during the first half of the twentieth century. Common building forms include vernacular two-story residences with side-gable roofs, and more commonly pattern book or catalog type houses that are 1, 1½, or 2 stories in height. Variations on the American Foursquare, bungalow, Cape Cod, and minimal traditional residential forms were especially common. No "high-style" architectural examples are present in the Rosedale Survey District; instead, buildings tend to be vernacular examples of period architecture.

During the first half of the twentieth century, growth continued to occur in an unplanned manner, with owners of large properties dividing their plots into smaller tracts that were then developed. The result is the presence of buildings of mixed construction dates in the same vicinity; often one nineteenth or early twentieth century residence is present among clusters of more recent dwellings.

Some public utilities were installed during this period of rapid residential growth in Rosedale. Also, a low stone wall was constructed in some areas to separate properties from the heavily traveled roadway (Photographs 16, 20, 21 and 58). Other than these elements, however, there is little in the way of landscape features or street furniture to unify the unplanned neighborhood.

As residences were established in the suburban area, commercial and public buildings became necessary as well. Stores, a post office, a school, a fire hall, and other resources appeared after the first decades of the twentieth century.

Maryland Historical Trust

Maryland Inventory of Historic Properties Form

Inventory No. BA-3198

Name

Continuation Sheet

Number 7 Page 1

Following World War II, growth in the area continued through construction of residences filling in un-built lots along Philadelphia Road, converting existing buildings along the road for new uses, and establishment of planned residential developments off of side streets in the area. Commercial strips and centers also developed during the second half of the twentieth century. These commercial strips are typically set back farther from the roadway to accommodate parking between the stores and Philadelphia Road.

Many of the buildings within the Rosedale survey district have been altered. Common alterations include additions, enclosure of porches, and the replacement of building materials such as windows, siding, and roofing. As a result of the haphazard, unplanned growth in the area in combination with the extensive alterations to individual buildings within the survey district, the overall character of the area lacks cohesiveness. The unplanned neighborhood is the cumulative result of several phases of growth. As a result, the individual resources within the neighborhood have a wide range of building styles and construction dates, representing various periods of suburbanization.

Evaluation for:

☐ National Register

☒ Maryland Register

☐ not evaluated

Prepare a one-paragraph summary statement of significance addressing applicable criteria, followed by a narrative discussion of the history of the resource and its context. (For compliance projects, complete evaluation on a DOE Form – see manual.)

The Rosedale Survey District is an example of an unplanned suburban neighborhood that consists of clusters of structures of various building styles and functions with a wide range in construction dates. The area is not segregated into pockets of resources with similar building styles or construction dates; instead it is a random mix of building types dating to the nineteenth and twentieth centuries.

Originally a farming community, Rosedale began to develop during the latter half of the nineteenth century when German, Polish, and English immigrants began to settle in the area. *Taylor's Map of Baltimore City and County*, which was published in 1857, indicates that the area was sparsely populated during the mid-nineteenth century. Some buildings were oriented toward the Baltimore/Philadelphia Turnpike, but most were set back quite a distance from the road reflecting their agricultural rather than road-related function. Area residents grew fruits and vegetables, which they sold at markets in Baltimore. While many residents were self sufficient, others made their living by working in the local iron mines, running a tavern, or working a professional job in Baltimore (Proctor 1997).

By 1863, additional roads south of the Baltimore/Philadelphia Turnpike (MD Route 7) had been developed, connecting the area to what was then the Baltimore, Wilmington & Philadelphia Railroad. Along with improvement of the transportation network came additional development in the area. In addition to several rural residences or farmsteads, a tavern, known then as the Blue Ball Tavern of M. Gettman (Geiman) and D. Weaver, was present along the roadway.

The Blue Ball Tavern (BA-1185), which was constructed in the mid-1840s during a time of great development and activity along the turnpike between Philadelphia and Baltimore, used to stand on the south side of Philadelphia Road (MD Route 7) approximately 50 feet southwest of the intersection of Kenwood Road. By 1886 the tavern had been in operation as a tavern and hotel for 40 years, but was no longer used as such. The Gettman family owned the property from at least 1853 to 1932 (Davis 1980:BA-1185). The building was demolished at some time between 1980 and 2005; only a stone outbuilding with a pyramidal roof remains.

In 1875, people living in the Rosedale area farmed parcels of land averaging between 10 and 70 acres (Proctor 1997). Development of Rosedale as an unplanned suburban neighborhood began following the Civil War. During the late nineteenth and early twentieth century, the concept of the "rural ideal" was popular. Because cities were crowded and dirty, it was considered healthier (in addition to being more pleasant) to live in a more rural setting than in the city. People who favored rural living over crowded, congested and unhealthy city life and had the means to do so chose to reside outside of Baltimore. During the earliest phase of movement from city to countryside, which occurred here beginning in the mid-nineteenth century, rural residences were built along early roadways on lots subdivided from larger

Number 8 Page 1

farm or estate properties.

The Diegel House (BA-2095) was one of several houses in the Rosedale Survey District constructed during the late 19th century. The Diegel family had acquired approximately six acres of land on the southwest corner of the intersection of Philadelphia Road (MD Route 7) and Golden Ring by 1876. They increased their holdings to about 14 acres by 1896, and acquired an additional acre by 1900. The property still measured about 15 acres in 1980 prior to demolition of the house between 1980 and 2005 (Davis 1980:BA-2095). A surviving residence that represents this early period of suburbanization is the Maddux House (BA-2097), which was built on the south side of Philadelphia Road around the turn of the twentieth century. The building is located between the German-American Protestant Sunday School (BA-2098), which was built in 1896, and Seward's Store (BA-2096). It is one of several examples of this residential style in the Rosedale Survey District today.

Constructed circa 1887, Seward's Store (BA-2096) is a large combined commercial and residential property located southwest of the intersection of Philadelphia Road and Hamilton Avenue near the heart of Rosedale. The store, which is no longer in use, served as a community center containing the post office in the late 1890s and a bank during the early 1900s.

Around the turn of the twentieth century there was a Protestant Episcopal, a Methodist Episcopal, and a German Lutheran Church in Rosedale, as well as a Jewish cemetery (Scharf 1971:931). The Protestant Episcopal congregation was organized in 1875, and the corner stone the frame church building was laid in 1877 on land donated by a member of the congregation. The church, which was constructed at a cost of \$1,800, was consecrated in 1878 (Scharf 1971:931). The Primitive Baptist Church was built in 1896 and was used as a German-American Sunday School until 1939. It then sat vacant for twenty years before being given by the Snyder family to the Primitive Baptists. The building has served as the Primitive Baptist Church since 1959 (Observer 1975). Rosedale Cemetery (BA-3197), a +/- 50-acre Jewish Cemetery, was established in 1893.

By 1915, the area along Philadelphia Road now known as Rosedale had begun to develop the character that it has today. Large rural lots were being divided into smaller parcels, on which residences and/or commercial establishments were developed. Although the unplanned neighborhood began through the random construction of isolated residences along Philadelphia Road during the mid- to late-nineteenth century, in the early decades of the twentieth century suburban growth began to form cohesive neighborhoods.

In some cases speculators purchased small farms and subdivided them for residential use. These neighborhoods continued to be located along major transportation routes such as Philadelphia Road, often centered on or connected to crossroads. The result was the development of an informal gridiron as growth continued on the main crossroads and new back roads were developed. Lot sizes were still large compared to urban lots and later subdivisions, but they were substantially smaller than the 10 to 70 acres common during the late nineteenth century.

By the 1920s, homes lined Philadelphia Road from Baltimore up to Golden Ring Road (Proctor 1997). Organized efforts to develop Rosedale as a suburb of Baltimore were underway by the 1920s. The Community Improvement Association of Philadelphia Road (also known as the Baltimore-Philadelphia Road Improvement Association) was an early effort to

Maryland Historical Trust

Maryland Inventory of Historic Properties Form

Inventory No. BA-3198

Name
Continuation Sheet

Number 8 Page 2

preserve the historical integrity of the old turnpike route (Davis 1980:BA-2096). The Rosedale Community Improvement Association worked to promote the Rosedale area, offering utilities and other similar benefits to prospective homeowners.

In 1922 three acres of land on Chesaco Avenue between Philadelphia Road (MD 7) and Pulaski Highway (U.S. Route 40) were donated for the construction of a new Catholic Church in Rosedale. Construction began in 1924, and by 1931 the church had more than 1,000 parishioners (Proctor 1997). A new post office designated as Rosedale was established in 1927, through the efforts of the Rosedale Community Improvement Association. A booklet published by the Consolidated Gas Electric Light and Power Company in 1929 boasted the modern conveniences, including electric appliances as well as proximity to schools, churches, and stores, offered in the new planned suburban development known as Rosedale Gardens (located just outside of the Rosedale Survey District) where homes sold for between \$3,000 and \$6,000, a moderate price for the times. In addition to electric service, gas lines were extended through Rosedale after 1931. Most home owners couldn't afford to rent gas appliances from the gas company, but used gas for lighting. With the additional convenience of a gas extension, Rosedale grew to more than 10,400 residents by 1940 (Proctor 1997).

Through the remainder of the twentieth century, unplanned residential construction continued to fill in the neighborhood along Philadelphia Road, while a combination of unplanned neighborhoods and planned developments took place on either side of the roadway. Individuals could purchase a building lot, select a house plan, and hire a contractor to build their residence without involving a developer. Houses were constructed in this manner in a variety of locations, including both rural environments and established communities. The fact that standardized house plans were available means that the buildings present in Rosedale are ubiquitous; neighborhoods containing similar buildings are found throughout the region and most of the country. Although it is like many other areas, the unplanned neighborhood was not segregated into pockets of resources with similar building styles or construction dates; instead it was a random mix of building types from the nineteenth and twentieth centuries.

In order to support the growth that took place around the mid-twentieth century, commercial and civic resources were improved as well. Golden Ring Middle School (BA-3199) was built in 1931, and by the late 1940s there was a need for a new elementary school. Rosedale Elementary School, which was located south of the Rosedale Survey District on Old Philadelphia Road, was the first in the county to boast a library and health suite (Proctor 1997).

Rosedale continued to grow steadily as a residential suburb during the 1950s, with rapid development taking place during the 1960s. Three quarters of the housing units present in Rosedale in 1990 were built between 1950 and 1979.

10. Geographical Data

Acreage of surveyed property	<u>unknown</u>	
Acreage of historical setting	<u>unknown</u>	
Quadrangle name	<u>Baltimore East; Middle River</u>	Quadrangle scale: <u>1:24,000</u>

Verbal boundary description and justification

The Rosedale Survey District includes all properties with a direct connection to Philadelphia Road (MD 7) between the Baltimore City/County line in the southwest and the end of the I-695 on/off ramps in the northeast. The elements that comprise this resource are unified by their association with Philadelphia Road and are separated from other areas of growth by changes in building density and neighborhood organization.

Because the resource does not appear to be eligible, a formal boundary was not defined.
